                    {
                    public int value;
                    }
}
}
```

PRACTICAL:2

Program 1

Write console based program in code behind language VB or C# to print following pattern.

```
@ @ @ @ @
@ @ @ @
@ @ @
@ @
(a)
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
namespace practical2
{
    class Program
    {
    static void Main(string[] args)
        {
            for(int i=5;i>0;i--)
            {
                for (int j = i; j > 0; j--)
                {
                    Console.Write("@");
                }
                Console.WriteLine(" ");
            }
            Console.ReadKey();
        }
    }
}
```

Program 2

Write console based program in code behind language VB or C# to print following pattern.

```
1
12
123
1234
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
namespace practical2._1
{
    class Program
    {
        static void Main(string[] args)
        {
            for(int i=1;i<=5;i++)</pre>
```

```
{
                for(int j=i;j>0;j--)
                {
                     Console.Write("{0}",i);
                }
                Console.WriteLine("");
            }
            Console.ReadKey();
        }
    }
}
```

Program 3

Write C# code to prompt a user to input his/her name and country name and then the output will be shown as an example below:

Hello Ram from country India

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
namespace practical2._2
{
```

```
class Program
{
    static void Main(string[] args)
    {
        string name;
        string country;
        Console.WriteLine("enter your name:");
        name=Console.ReadLine();
        Console.WriteLine("enter your country:");
        country = Console.ReadLine();
        Console.WriteLine("hello {0} from country {1}",name,country);
        Console.ReadKey();
    }
}
```

Program 4

What is inheritance? Create C# console application to define Car class and derive Maruti and Mahindra from it to demonstrate inheritance.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
namespace practical2._3
{
    class car
    {
        public void Method1()
            Console.WriteLine("this is the method of car class");
        }
    }
    class maruti:car
        public void method2()
        {
            Console.WriteLine("this is the method of maruti");
            Console.ReadKey();
        }
    }
    class mahindra:car
    {
        public void method3()
        {
```

```
Console.WriteLine("this is the method of mahindra");
           }
     }
     class Program
     {
           static void Main(string[] args)
           {
                 mahindra m = new mahindra();
                 maruti m1 = new maruti();
                 m.Method1();
                 m1.Method1();
                 Console.ReadKey();
           }
     }
}
 this is the method of car class
this is the method of maruti
this is the method of car class
this is the method of mahindra
```

PRACTICAL:3

AIM: Method & constructor overloading

Program 1

Write a c# program to add two integers, two vectors and two metric using method overloading.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
namespace p3
{
    public class Add
        public void add()
        {
            int[,] m1 = new int[50, 50];
            int[,] m2 = new int[50, 50];
            int[,] m3 = new int[50, 50];
            Console.WriteLine("enter size of array:");
            int size = Convert.ToInt32(Console.ReadLine());
            Console.WriteLine("enter first array:");
            for (int i = 0; i < size; i++)
            {
                for (int j = 0; j < size; j++)
                {
                    m1[i, j] = Convert.ToInt32(Console.ReadLine());
                }
            }
            Console.WriteLine("enter second array:");
            for (int i = 0; i < size; i++)
            {
                for (int j = 0; j < size; j++)
```

```
{
                m2[i, j] = Convert.ToInt32(Console.ReadLine());
            }
        }
        for (int i = 0; i < size; i++)
        {
            for (int j = 0; j < size; j++)
            {
                m3[i, j] = m1[i, j] + m2[i, j];
            }
        }
        Console.WriteLine("addition array:");
        for (int i = 0; i < size; i++)
        {
            Console.Write("\n");
            for (int j = 0; j < size; j++)
            {
                Console.Write("{0}\t", m3[i, j]);
            }
            Console.Write("\n");
        }
    }
    public int add(int a, int b)
    {
        return (a + b);
    }
}
    public class Vector
    {
        public void add()
            Console.WriteLine("enter first vector");
            int x = Convert.ToInt32(Console.ReadLine());
```

```
int y = Convert.ToInt32(Console.ReadLine());
                int z = Convert.ToInt32(Console.ReadLine());
                Console.WriteLine("enter second vector");
                int x1 = Convert.ToInt32(Console.ReadLine());
                int y1 = Convert.ToInt32(Console.ReadLine());
                int z1 = Convert.ToInt32(Console.ReadLine());
                int x2 = x + x1;
                int y2 = y + y1;
                int z2 = z + z1;
                Console.WriteLine("<" + x2 + "," + y2 + "," + z2 + ">");
            }
        }
  class Program
    {
        static void Main(string[] args)
        {
            Add a1 = new Add();
            Vector v1 = new Vector();
            v1.add();
            a1.add();
            int res=a1.add(1, 2);
            Console.Write("method overloading for addtion{0}",res);
            Console.ReadLine();
        }
    }
}
```

```
enter first vector

```

Program 2

Write a c# program that create student object. Overload constror to create new instant with following details.

- 1. Name
- 2. Name, Enrollment
- 3. Name, Enrollment, Branch

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.Reflection;
namespace p3a1
{
    class Program
    {
        public int ID { get; set; }
```

```
public string Name { get; set; }
        String name, branch;
        int enrol;
        public Program(String name)
        {
            this.name = name;
            Console.WriteLine("constructor 1:" + name);
        }
        public Program(String name, int enrol)
            this.name = name;
            this.enrol = enrol;
            Console.WriteLine("constructor 2:" + name + " " + enrol);
        }
        public Program(String name, int enrol, String branch)
        {
            this.name = name;
            this.enrol = enrol;
            this.branch = branch;
            Console.WriteLine("constructor 3:" + name + " " + enrol + " " +
branch);
        }
        static void Main(string[] args)
        {
Program p1 = new Program("bob");
            Program p2 = new Program("bob", 1);
            Program p3 = new Program("bob", 1, "computer");
             Console.ReadLine();
        }
  }
```

```
constructor 1:bob
constructor 2:bob 1
constructor 3:bob 1 computer
```

160470107025 REFLECTION

PRACTICAL:4

Create a c# program to find Methods, Properties and Constructors from class of running program.(Use Class from previous practical)

```
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Reflection;
using System;
namespace p2
    class P4
    {
        public static void Main() {
            Type T = Type.GetType("p2.Example");
            MethodInfo[] methods = T.GetMethods();
            foreach (MethodInfo method in methods)
            {
                Console.WriteLine(method.ReturnType + " " + method.Name);
            }
            PropertyInfo[] properties = T.GetProperties();
            Console.WriteLine("\nProperties");
            foreach (PropertyInfo property in properties)
            {
                Console.WriteLine(property.PropertyType + " " + property.Name);
            }
            Console.WriteLine("\nConstructors");
            ConstructorInfo[] constructors = T.GetConstructors();
            foreach (ConstructorInfo constructor in constructors)
            {
                Console.WriteLine(constructor.ToString());
            }
```

160470107025 REFLECTION

}

```
}

AIM: File Handling

Program 1:

Write a C# program to copy data from one file to another using StreamReader and StreamWriter class.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.IO;
namespace p2
{
    class P4_1
    {
        public static void Main(){
            string f1 = @"f1.txt";
            string f2 = @"f2.txt";
            using (StreamReader reader = new StreamReader(f1))
            using (StreamWriter writer = new StreamWriter(f2))
                writer.Write(reader.ReadToEnd());
        }
    }
}
```

160470107025 FILE HANDLING

Program 2:

Write a C# Program to Read Lines from a File until the End of File is reached.

```
using System;
using
System.Collections.Generic;
using System.Linq;
using System.Text;
 using System.IO;
 namespace P2
{
    public class CopyFile
    {
        public void copyFile(string f1, string f2)
        {
            using (StreamReader reader = new StreamReader(f1))
            using (StreamWriter writer = new StreamWriter(f2))
            {
                string line = null;
                while ((line = reader.ReadLine()) != null)
                    writer.WriteLine(line);
            }
        }
    }
    public class mmain{
          public static void
               Main(){
            CopyFile cp = new CopyFile();
            string f1 = @"E:\Sem-6\VS\p2\p2\f1.txt";
            string f2 = @"E:\Sem-6\VS\p2\p2\f2.txt";
            cp.copyFile(f1,f2);
        }
    }
}
```

160470107025 FILE HANDLING

Program 3:

Write a C# Program to List Files in a Directory.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.IO;
namespace p2
{
    class ListFile
    {
          public static void
               Main() {
            string[] Directories = Directory.GetDirectories(@"E:\Sem-6\VS");
            foreach (string dir in Directories)
